## PROFILE

Software and data engineer with experience building logistics platforms, event-driven data pipelines, cloud delivery workflows, and analytical systems. M.S. Analytics candidate combining production engineering with sports and decision-support applications.

## EXPERIENCE

**Software Engineer** **May 2023 - Nov. 2025**

*Multidev Technologies Inc. | Montreal, QC*

- Led development of a cloud-native, multi-carrier shipping platform integrating Canada Post, FedEx, UPS, and USPS APIs for thousands of monthly shipments using Laravel, Vue.js, MySQL, and Inertia.
- Migrated containerized workloads from Google Cloud Docker Swarm to AWS Lightsail and introduced GitHub Actions CI/CD, reducing deployment time from hours to minutes and increasing release frequency by 3x.
- Built event-driven Laravel, Redis, MySQL, and InterBase ingestion pipelines that reduced manual reconciliation by 90%; background processing and caching improved shipping workflow performance by 70%.
- Developed carrier libraries, CRM/POS integrations, Chocolatey/ProGet package tooling, and centralized Grafana/Loki/Alloy observability for production services.

**Junior Software Engineer** **Jan. 2023 - May 2023**

*Multidev Technologies Inc. | Montreal, QC*

- Built Python and Object Pascal tools for InterBase extraction, transformation, auditing, and visualization with Pandas and Seaborn.
- Improved query efficiency by 30% through indexing and transaction handling; automated onboarding with Python, Jinja2, and Pandas, improving onboarding efficiency by 80%.
- Added PHPUnit and Postman validation, refactored legacy modules, and improved internal documentation for regression safety and maintainability.

**Technical Analyst / QA Analyst** **Jun. 2022 - Dec. 2022**

*Multidev Technologies Inc. | Montreal, QC*

- Automated login and backup workflows with Python across InterBase, MySQL, and Firebird; supported POS/CRM clients and event load management.
- Deployed ELK-based centralized log analysis to improve client-side troubleshooting and operational visibility.

## SELECTED ENGINEERING PROJECTS

**USC Football Analytics Data Warehouse** **May 2026 - Ongoing**

*dbt, SQL, Python, Azure, Databricks*

- Design and implement an analytical warehouse ingesting PFF API data for repeatable pipelines, dashboarding, and football decision support.

**Electromagnetic Tweezer Apparatus** **Sept. 2021 - Apr. 2022**

*Python, MATLAB, OpenCV, Pandas*

- Processed image sequences and built a particle-tracking workflow to support a control scheme for tweezer manipulation; maintained project plans and LaTeX documentation.

## EDUCATION

**University of Southern California** **Jan. 2026 - Dec. 2027 (expected)**

M.S. Analytics, CGPA 3.85

**McGill University** **Sept. 2017 - May 2022**

B.Eng. Electrical Engineering; Minor in Technological Entrepreneurship

## TECHNICAL SKILLS

**Languages:** PHP, Python, Java, JavaScript, SQL, Object Pascal, Rust, Bash, PowerShell
**Frameworks:** Laravel, Vue.js, React, Node.js, Express.js, Tailwind, PrimeVue
**Data:** MySQL, PostgreSQL, MSSQL, InterBase, Firebird, Snowflake, Databricks, BigQuery, dbt, Spark, Pandas
**Cloud & Delivery:** AWS, GCP, Azure, Docker, GitHub Actions, Nginx, Grafana, Loki, Alloy, ELK, ProGet, Chocolatey
**Coursework:** Cloud Analytics, Data Engineering Fundamentals, Reinforcement Learning, Large-Scale Optimization, Predictive Analytics
