Education

University of Southern California — Los Angeles, CA
M. Sc in Analytics - CGPA 3.85 — *Jan. 2026 – Dec. 2027 (expected)*

McGill University — Montreal, QC
B. Eng in Electrical Engineering; Minor in Technological Entrepreneurship — *Sept. 2017 – May 2022*

Experience

Multidev Technologies Inc. — Montreal, QC

Software Engineer — *May 2023 – Nov. 2025*

- Led development of a multi-carrier, cloud-native shipping platform integrating Canada Post, FedEx, UPS, and USPS APIs. Delivered RESTful services and responsive UIs with Laravel, Vue.js, MySQL, and Inertia, supporting thousands of shipments monthly.
- Migrated infrastructure from Google Cloud Docker Swarm to AWS Lightsail, implementing containerized deployments and CI/CD pipelines with GitHub Actions. Reduced deployment time from hours to minutes and increased release frequency by 3x.
- Architected event-driven ingestion pipelines with Laravel observers, Redis queues, and SMTP alerts to synchronize MySQL with Interbase SQL client databases. Improved data reliability and reduced manual reconciliation by 90%.
- Implemented asynchronous background job processing and caching for shipping queries, cutting API response latency and improving shipping workflow performance by 70%.
- Developed carrier integration libraries: a Composer-packaged UPS PHP libraryand a FedEx REST API wrapper, integrated into the shipping platform with GitHub Deploy pipelines for secure package delivery.
- Built a package manager application for microservices and binaries using Chocolatey and ProGet, automating deployments via PowerShell and APIs. Reduced infrastructure storage costs and streamlined remote provisioning.

Junior Software Engineer — *Jan. 2023 – May 2023*

- Built Python and Object Pascal GUI tools to extract, transform, and visualize Interbase RDBMS data using Pandas/Seaborn, enabling per-user auditing.
- Optimized ORM queries, SQL performance, and API routing across Laravel services via the implementation of indexing and transaction handling. Improved database query efficiency by 30% and reduced API response times.
- Developed a client on-boarding application using Python, Jinja2, and Pandas to translate client-side configuration setups into Laravel seeder files. Improved on-boarding efficiency by 80% by reducing manual setup time and enabling faster adoption of the web platform.

Technical Analyst / QA Analyst — *Jun. 2022 – Dec. 2022*

- Automated daily workflows with Python scripts to support multi-platform logins and optimized backup management (Interbase, MySQL, Firebird).
- Worked on client success for POS CRM systems clients like the Cleveland Guardians Steve Madden. Build maintained performance reports, dailies and assisted in load management during marquee events.

Selected /Research

USC Football Data Warehouse Project | *dbt, SQL, Python, Azure, Databricks* — May 2026 – Ongoing

- Worked closely with the USC Football team to design and implement an analytical data warehouse, ingesting data via PFF API, to enable analytical pipelines and data dashboarding to support decision making.

.

Modeling Attacking Sequences in Soccer | *Python, Tensorflow, OpenCV, Pandas, Snowflake*January 2026 – May 2026

- Using historical data from La Liga, transformed and processed event data into an analytics database modeled to support offense decision making. Implemented an ensemble descision-tree model to infer key variables, which in an attack, result in high expected goals output.

.

Technical Skills

Languages: PHP, Python, Java, JavaScript, SQL, Object Pascal, Rust, Bash, PowerShell,
Frameworks: Laravel, Vue.js, React, Node.js, Express.js, Tailwind, PrimeVue
Cloud & DevOps: AWS, GCP, Microsoft, Azure, Docker, GitHub Actions, Nginx, Apache2, ProGet, Chocolatey
Monitoring & Observability: Grafana, Loki, Alloy, ELK (Elasticsearch, Logstash, Kibana)
Data Tools & Analytics: Tableau, Snowflake, Pandas, NumPy, Seaborn, Selenium, OpenCV, Databricks, BigQuery, dbt, Apache Spark
Relevant Coursework: Cloud Analytics, Fundatmentals of Data Engineering, Reinforcement Learning Large-Scale Optimization, Predictive Analytics
